

TECNO R-evolution

TECNO R-evolution  
**Domestic**

## 10 new reasons...always SISTEM AIR

- 1 BiVac system**  
With Tecno R-Evolution products, you can discover the innovation of BiVac, a device introduced by Sistem Air. This device allows the user to choose between cyclonic or microfiber bag filtration (In case of microfiber bag selection, there is no need to clean the filter anymore).
- 2 New filtration system with low maintenance need**  
It uses a conic filter made by polyester and aluminum fibers. It is connected to electric ground thus eliminating the static electricity which significantly reduces the dust remaining on filter. As a result, cleaning the filter becomes a rare operation.
- 3 Service inlet (body attached air inlet)**  
It allows the cleaning of the area around the appliance (available by choosing cyclonic filtration).
- 4 Energy saving**  
It consumes 15% less electric energy (on two of most used versions).
- 5 Microfiber filtering bag**  
Effective filtering and real hygiene thanks to easy closing component of dust bag.
- 6 Intelligent software**  
With Tecno R-Evolution products, end user can choose a variety of control options to customize maintenance. It is easy without any electric interventions.
- 7 Relief valve**  
High reliability thanks to new relief valve and Soft Start system, which ensure the endurance of the appliance in heavy duty conditions.
- 8 System for dusty filter warning**  
The warning signal for dusty filter, uses a sensor and it is not mechanically programmed.
- 9 Easy read control panel**  
You can control central vacuum unit status any time thanks to the information display on the control panel.
- 10 Elegant design**  
Continuous research for innovation makes Tecno R-Evolution a uniquely designed product. It will be a pity to place it in a corner!
